Cybersecurity Assignment 4

Rules:

- Any excuse or query, that the concepts given in assignment is not discussed in the lectures will not be accepted or entertained.
- You can seek help from LLMs (ChatGPT, Claude, Gemini) but all the practical parts should be implemented and performed by yourself.
- Screenshots are mandatory, only theoretical based assignments will not be marked as all the lectures are based on practical.
- Screenshots regarding the execution of command should contain your name/roll no/student id in the CLI (CMD/Terminal). Otherwise, the SS will be accepted and result in negative marking. Example:

here we have “zahee” but it will be different on your end.

here we have “talha” but will be different in your end.

- Submit single report solving all questions in the assignment. The reports should include small explanation of WHAT are you doing and WHY are you doing with a screenshot showing HOW are you doing.
- Always mention you name, student ID, CNIC at the top of assignment. The name of file should also be well named. Example**: assignemnt1_talha.docs**
- Any kind of plagiarism will result in 0 marking, no matter if you are copying or being copied.
- To seek help from community, scan the QR below or click here:

- Good luck in the realm of cyber.

Q1:

On Metasploitable2 that you setup in the previous assignment, scan for the vulnerability named Smiley Face Backdoor with nmap (you can also use any other scanner), and exploit the vulnerability using the Metasploit framework. The same framework that is used in lectures to exploit Eternal Blue.

Compile a report providing all steps from scanning to gaining a shell with SS.

Q2:

In Lectures we setup DVWA on the Kali Linux, try to setup the same DVWA on windows by setting up the XAMP server in windows. Compile report what components are needed, their install process and the final DVWA access after setting up everything.
